Sprint 3 Planning

Goal：Basicly achieve all functions of the product. Make improvements for the existing functions. Release the first well developed version of the product for tests.

Method:

1. Review user stories and the client’s requirements to have a final confirmation; complete the rest of the product.
2. According to diagrams, check the current product and make modifications on the existing code if necessary.
3. Make necessary adjustments and supplements to the product.

Metrics:

1. Does the product equip all functions the client needs and fit to the client's preference?
2. Is the product complete and ready for testing?
