Motivational Model: Do / Be / Feel / Who

1. Who — Stakeholders and User Roles

The motivational model diagram identifies two actors. The Author is the primary user of the workbench; the Developer is the actor responsible for building and maintaining the application. The Source column shows the user stories or quality attributes that motivate each role.

Table 1: Stakeholders and user roles

Role	Description	Core Goal	Source
Author	The primary user: a writer who creates, plans and manages a long-form manuscript inside the workbench	Plan, structure and track a writing project from project setup through chapter planning	All user stories
Developer	The actor who builds and maintains the Author's Workbench application	Deliver a maintainable, extensible and reliable application	Developme nt side (Maintainabi lity)

2. Do — What the System Shall Do

The system shall provide the following goals, corresponding to the goal nodes (rectangles) in the motivational model diagram. Each goal lists its sub-goals from the diagram and the user stories that implement it.

Table 2: Goals (Do)

#	Goal (diagram)	Included sub-goals / behaviours	User Stories
G1	Browse and Search	Search all existing project; Browse all existing project	—
G2	Create and manage longer-term project	Select from existing structures; Manage Project Detail; Customise structure template	US1–US5, US10, US11
G3	Track Character	Create character; Manage character's detail; Track character's detail using detail; Browse and search all existing characters; Manage character's event	US12–US23, US28–US38
G4	Track plot	Estimate word count and chapter length; Map plot dynamically; Display how much chapters were planned; Attach chapter summary/note; Connect existing character in the chapter	US6–US9, US24–US27, US39–US44

G5	export	Export to excel	US50
G6	Auto-save and Data Reliability	Save to local; Display last-save timestamp	US45–US49

3. Be — What the System Shall Be

The system shall exhibit the following qualities, corresponding to the resources (clouds) and top-level quality soft goals in the motivational model diagram.

Table 3: Qualities (Be)

#	Quality / Resource (diagram)	Requirement Statement	User Stories
B1	security	Project data shall be stored securely on the user's local device without requiring a server	US45, US51
B2	consistency	Character, event and location information shall remain consistent and traceable across the project	US28–US44
B3	flexibility	Story structures, character details and the generated plan shall be customisable and manually adjustable	US10, US11, US18, US36
B4	reliability	All changes shall be reliably saved to local storage, with visible save status and unsaved-change warnings	US45–US49
B5	easy-to-use, clean, professional	The interface shall be easy to use, visually clean and professional, so that planning does not interrupt the writing flow	US1–US4, US6–US9

4. Feel — How Users Should Feel

The following experience goals correspond to the soft goals in the motivational model diagram. Each soft goal is delivered by specific features and traced to the relevant user stories.

Table 4: Soft goals (Feel)

#	Soft goal (diagram)	What delivers it	User Stories
F1	proud	Seeing the manuscript structure take shape and the projected chapter plan become concrete	US6, US24
F2	confidence	Accurate automatic calculations: projected chapter count, act/beat mapping and character ages	US6–US9, US21

F3	interested	Browsing and searching existing projects and characters to explore the story world	G1 Browse and Search (gap — no US yet)
F4	In control	Managing the project, customising story structures and manually adjusting the generated plan	US3, US10, US11
F5	Supported	Comprehensive character tracking: details, events, locations, relationships and age progression	US12–US23, US28–US38
F6	Focused	The visual chapter plan, notes and timeline keep the author focused without losing project context	US4, US24–US27, US39–US44
F7	efficient	Quick export of the story plan to Excel for review or further work outside the application	US50
F8	Secure	Automatic local saving, visible save status and data reliability so the author never loses work	US45–US49
